

Client: Italian Chamber of Commerce for Germany

Location: Potsdam, Germany

Time Frame: 02/2018 – 04/2018

Name of Project: Report on Multimodal Nodes in Bavaria (Nuremberg & Hof)

Main Project Features:

- Investigation of the internal connectivity of the node and movement of cargo within the node, main hinterland connectivity of the nodes and last mile connectivity services
- Determination of management structure of each regional node and their respective multimodal terminal
- Identification of activities and processes in the terminal with a focus on optimisation of such operations
- Investigation of modal split in both terminals and the energy supply for the selected transportation means
- Identification of operations that use up energy and the amount of energy used
- Investigation on best practice examples of using alternative fuels for the same transportation means and energy efficiency solutions
- Elaboration on as-is and to-be analysis through SWOT and KPI evaluations as well as benchmark analysis
- Identification of key player influencing the business activities within the scope of the study through stakeholder mapping

Subjects: Logistics, intermodal transportation
